

FRONT-END DEVELOPMENT

ASSIGNMENT 2

Problem Statement

Simple Event Registration Page – Styling with CSS

Small events such as workshops, seminars, and college programs need a simple and visually appealing way to collect participant details.

In **Assignment-1**, you created the structure using HTML.

In **Assignment-2**, you will enhance the same page using **CSS** to improve layout, readability, and user experience — without adding backend functionality.

Level-2: Presentation & Layout (CSS Implementation)

Objective

Apply CSS to transform the basic HTML page into a clean, professional-looking registration interface.

Requirements

1. Apply Global Styling

Style the overall page for a consistent appearance.

- Set a **pleasant background color or gradient** for the page.
- Choose a readable **font family** (e.g., Arial, Verdana, sans-serif).
- Add spacing using **margin and padding**.
- Maintain consistent **text alignment and colors**.

2. Style the Event Title and Description

Make the header section visually prominent.

- Increase heading size and apply a distinct color.

- Add spacing below the title.
 - Highlight the description using line-height for readability.
 - Optionally add a subtle divider line.
-

3. Design the Event Information Section

Improve the list/table displaying:

- Event Date
- Time
- Venue
- Organizer Name

Styling Expectations:

- Add borders and spacing.
 - Use background shading for better separation.
 - Align text neatly.
 - Apply hover effect (optional).
-

4. Enhance the Registration Form Layout

Form Container

- Place the form inside a **centered card-style layout**.
- Add:
 - Border
 - Padding
 - Rounded corners (border-radius)
 - Light box-shadow

Field Alignment

- Ensure labels and inputs are properly spaced.
 - Inputs should have:
 - Uniform width
 - Padding for usability
 - Consistent margins
-

5. Style Fieldsets and Legends

Since Assignment-1 grouped data using fieldset and legend, now improve them visually.

- Add border and internal spacing.
 - Highlight the legend with:
 - Bold text
 - Slight background color
 - Padding
-

6. Improve Input Elements

Style all form controls:

Element	Styling Requirement
Textboxes	Add padding, border-radius
Dropdown	Match other input styles
Radio/Checkbox	Provide spacing between options
File Upload	Align with other inputs
Textarea	Allow comfortable height

Element	Styling Requirement
Focus Effect	Change border color when selected

7. Button Styling (Important)

Design attractive buttons for:

- **Submit**
- **Reset**

Expected Styles:

- Background color
 - Padding
 - Rounded edges
 - Cursor pointer
 - Hover effect (color change)
 - Slight shadow or transition effect
-

8. Style the Participants Table (Static Section)

Enhance the placeholder table created in Assignment-1.

- Add borders and collapse them neatly.
 - Use header background color.
 - Alternate row coloring (zebra stripes).
 - Add hover highlight effect.
-

9. Style the Declaration Checkbox Section

Make the declaration noticeable but not distracting.

- Add spacing above it.

- Align checkbox with label text.
 - Slightly reduce font size for subtle emphasis.
-

10. Footer Design

Create a clean footer section containing:

- Contact Email
- Help Desk Number
- Copyright

Styling Requirements:

- Add background color different from main page.
 - Center align text.
 - Provide padding.
 - Use smaller font size.
 - Add top margin to separate from form.
-

Suggested CSS Concepts to Use

Students should demonstrate usage of:

- Selectors (element, class, id)
- Box model (margin, border, padding)
- Colors & backgrounds
- Typography (font-size, font-family)
- Alignment and spacing
- border-radius
- box-shadow
- hover effects

- Table styling
 - Form styling
 - Basic responsive thinking (optional bonus)
-

Expected Outcome

By the end of Assignment-2:

- The plain HTML page becomes a **well-designed user interface**.
 - The layout is structured, readable, and visually balanced.
 - Students understand how CSS controls **presentation without changing functionality**.
-

Deliverables

Students must submit:

1. index.html (updated HTML from Assignment-1)
2. style.css (external stylesheet — mandatory)
3. Screenshots of the styled page
4. Proper folder structure
