TITLE:

1. Use Case and Assumptions

(This section explains the scenario in which students need a simple web application to track their learning activities. Mention any assumptions made while designing the solution.)

2. Problem Statement

(This section describes the goal of the assignment, which is to apply CSS styling to transform the basic HTML page into a clean and professional-looking interface.)

3. Objective

(State the main goal of the project, which is to design a lightweight student activity tracker using only front-end technologies.)

4. Key Features

(List the important features that the application will provide to users.)

4.1 Home Page

(Design a simple home page that displays the application title and a welcome message for users.)

4.2 Activity List View

(Create a section that displays a list of activities with the following details:

- *Activity Name*
 - *Short Description*
 - *Current Status (Pending / Completed))*
-

4.3 Mark Activity as Completed

(Provide an option for users to update the status of an activity from Pending to Completed.)

4.4 Progress Summary

(Display a simple progress indicator showing how many activities have been completed (Example: “3 out of 6 activities completed”).

4.5 Navigation

(Allow users to navigate easily between different sections or pages of the application.)

5. UI and Usability Considerations

(Explain how the application ensures clean design, readable typography, consistent spacing, responsive layout, and user-friendly buttons.)

6. Technology Used

(Mention the technologies used to build the project such as HTML, CSS, JavaScript, and optionally React (basic level)).

7. Data Handling Method

(Describe how activity data is stored and managed (static data, JSON file, or local storage).)

8. High-Level UI Flow / Wireframe

(Include a simple wireframe or flow diagram showing how users move through the application.)

9. Implementation Approach

(Briefly explain how the application will be structured and how different components will work together.)

10. Expected Outcome

(Describe the final result of the project and how it helps students track their activities effectively.)

11. Learning Outcome

(Explain the skills gained, such as UI design, basic interactivity, front-end development, and usability planning.)

12. Conclusion

(Summarize the overall solution and highlight how the project meets the stated objective.)
